

EF-650

Greatly reduces Hole-wall issues:

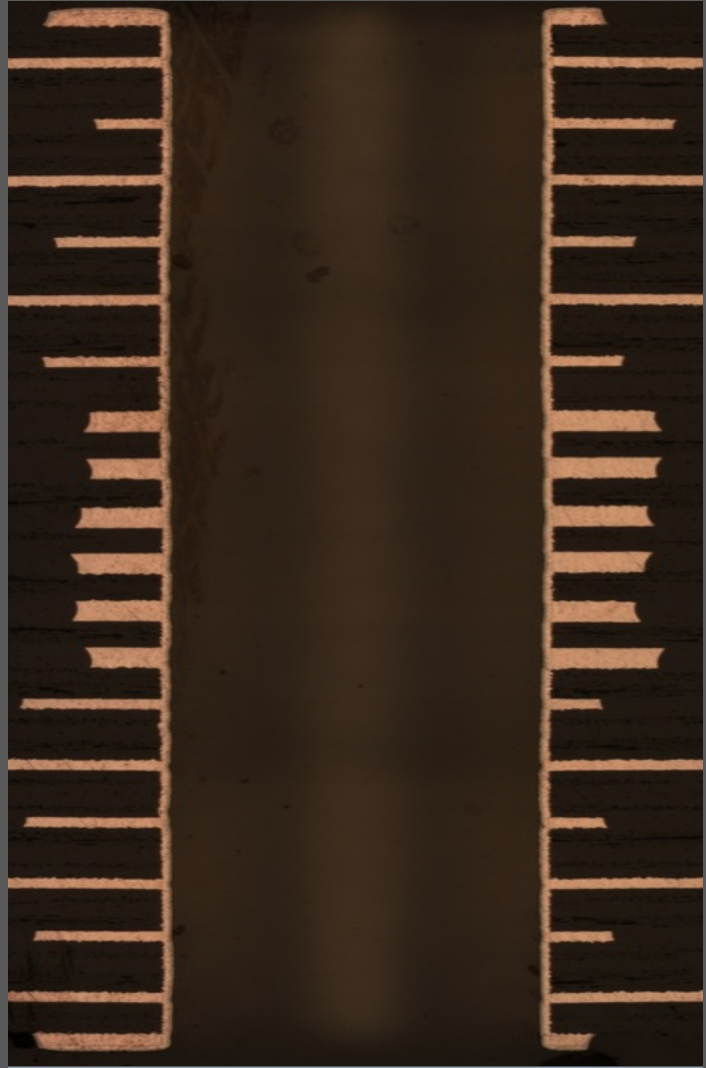

- Nail-heading
- Smear
- Gouges

Extends tool wear

Minimum Friction

This medium-gloss multi-layered coated MDF core promotes fluid, low impact hole exits. By minimizing traditional drill-backer issues including burring and debris while introducing the added feature of minimum friction both on exit and during hole evacuation. Cleaner cycles mean cleaner holes and better plating surfaces.

This is our most advanced backer and is designed for mission critical applications and highly sensitive mechanical demands: micro drilling <8mil, high hole-count designs, high aspect ratio and high friction base materials (polyimide, aluminum), please see TDS for additional details.

EF-650 Advanced Backer is available for your evaluation, please call for samples.
