

T-Foil Aluminum Entry

for precision in back drill and controlled -depth drilling

**0.38mm Phenolic (XPC)
18um Aluminum**

- * No gaps in between layers to propogate burrs
- * The thinnest conductive layer maintains +/-2um tolerance
- * The tight tolerance minimizes inconsistencies in contact drilling calculations for controlled depth tolerances below 1.0%
- * Improved loading efficiency - only one product to improve registration and manage high performance depth management

Test data and detailed properties available on request
